Treating urological cancers: New twists and turns in the road

Aims and objectives of this session
• Give an overview of the progress in prostate cancer diagnosis and management to date, with a focus on potential future advances in hormone manipulation in the field
• Provide an update on the recent changes in the RCC treatment landscape from the adjuvant to first- and second-line settings
• Educate attendees on the role of enhanced visualisation techniques in bladder cancer in terms of diagnosis and staging, as well as the resulting clinical outcomes.

18:00 - 18:05
Welcome and introduction
N. James, Birmingham (GB)

18:05 - 18:30
How far have we improved on prostate cancer management?
T. Lynch, Dublin (IE)

18:30 - 18:55
Systemic therapy in RCC – Current landscape and future directions
S. Osanto, Leiden (NL)

18:55 - 19:20
The future of non-muscle-invasive bladder cancer management
S. Shariat, Vienna (AT)

19:20 - 19:30
Questions and answers
N. James, Birmingham (GB)
T. Lynch, Dublin (IE)
